DETAILED ACTION

1. This Office Action is in response to the Amendment filed 10/5/2009. No claims have been amended. Claims 1-8 and 15-26 are now pending.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Richard Treanor on 10/15/2009.

3. The application has been amended as follows:

Insert the following at Page 3, line 3 of Specification:

-- BRIEF DESCRIPTION OF THE DRAWINGS

Fig. 1 is an optical micrograph of a plaque in Example 1.

Fig. 2 is an optical micrograph of a plaque in Example 4.

Fig. 3 is a transmission electron micrograph of a plaque in Example 1.

Fig. 4 is the stiffness of the plaques in Example 1-4.

Fig. 5 is the viscosity of the plastisols of Examples 6 and 7.

Fig. 6 is the viscosity of the plastisols of Examples 12 and 13. --

Allowable Subject Matter

4. Claims 1-8 and 15-26 are allowed.

5. The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest references: Elspass et al. (US Patent 5,883,173).

Elspass et al. disclose a latex comprising: at least one liquid selected from the group consisting of water, dimethyl formamide, aliphatic alcohols, aliphatic alkanes, esters, and ethers; about 0.1 wt.% to about 70 wt.% of a surfactant selected from the group consisting of quaternary ammonium, phosphonium, maleate, succinate, surfactants having carboxyl containing groups, acrylate, benzylic hydrogens, benzylic halogens, aliphatic halogens, and oxazoline; and about 0.2 wt.% to about 4 wt.%. based on the total weight of the latex, of a layered material having an interlayered separation and selected from the group consisting of smectite clay, montmorillonite, saponite, beidellite, montionite, hectorite, stevensite, vermiculite, and hallosite; the layered material being intercalated with about 0.1 wt.% to about 63 wt.% of a functionalized preformed polymer formed from at least one monomer selected from the group consisting of styrene, paramethyl styrene, butadiene, isoprene, chloroprene, ethylene, propylene, vinyl chloride, vinyl acetate, nitrites such as acrylonitrile, butene, hexene, heptane, isobutylene, octene, maleic anhydride, succinic anhydride, dienes, and acrylates, thereby expanding the interlayered separation of the layered material.

Thus, Elspass et al. do not teach or fairly suggest the claimed process for the manufacture of a composite material comprising drying a dispersion comprising: (a) at least one polymer, (b) at least one lamellar compound, and (c) at least one dispersing liquid, by atomization.

In light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
